## EDUCATION

### VNR Vignana Jyothi Institute of Engineering & Technology

Bachelor of Technology in Information Technology

CGPA: 9.08

Hyderabad

2023 – 2027

## EXPERIENCE

### Full Stack Developer Intern

June 2025 – July 2025

*Olive Crypto Systems*

*Hyderabad*

- Architected and developed a scalable MERN-based training platform handling 500+ concurrent users
- Designed RESTful APIs with optimized database queries, reducing response time by 40%
- Implemented role-based authentication and authorization with Microsoft OAuth/SSO for secure access control
- Built an audit-ready compliance system with detailed activity logging and real-time monitoring
- Developed an automated certification engine with a 3-tier validation hierarchy (Admin, Checker, Employee) for structured course approval and issuance

## PROJECTS

### Synthetic Data-Driven ASR Domain Adaptation

- Built a keyword-guided text generation pipeline using Llama3-8B to generate 121K domain-specific audio-transcript pairs through Tacotron2-DDC TTS without human labeling
- Fine-tuned Whisper-base using LoRA adapters with rank 32 and only 1.2% additional parameters, reducing WER by 29.3% in Weather, 19.9% in Music, and 4.4% in Sports domains
- Evaluated the model on 5,640 real-world open-source speech samples from Common Voice 17.0, demonstrating that domain relevant vocabulary contributes more to ASR adaptation than dataset size
- Tech Stack:** Python, PyTorch, Whisper, LoRA, PEFT, Llama3-8B, Tacotron2-DDC, HuggingFace Transformers

### Sales Ticket | [Live Demo](#) | [GitHub](#)

- Built a full-stack AI platform transforming Zendesk tickets into 4 revenue signals through an 8-step pipeline covering ingestion, classification, routing, drafting, embedding, retrieval, and visualization
- Architected a dual-database system using MySQL with 7+ tables and a Neo4j graph layer exposed through 20+ REST APIs for ticket workflows, account health tracking, graph analytics, and voice processing
- Implemented a RAG-based AI copilot using local MiniLM embeddings with cosine similarity across 2 vector stores for context-aware responses with persistent session memory
- Delivered a 7-view React dashboard with JWT-based role access, Groq-powered draft generation routed to 3 internal personas, and Zendesk API integration
- Tech Stack:** React, Node.js, Express.js, MySQL, Neo4j, Groq API, Xenova Transformers, JWT, Zendesk API

### Draft - Blog App | [Live Demo](#) | [GitHub](#)

- Architected a scalable blog platform with 3-role RBAC (Admin, Author, Reader) and role-specific dashboards
- Developed 10+ REST API endpoints across admin, author, and user modules to support article publishing, editing, deletion, commenting, user verification, and account status management.
- Tech Stack:** React.js, Node.js, Express.js, MongoDB, REST APIs, Clerk, Bootstrap, Git

## TECHNICAL SKILLS

**Programming Languages:** Java, JavaScript, Python, C

**Frontend & Backend:** React.js, HTML5, CSS3, Bootstrap, Node.js, Express.js, REST APIs, API Integrations

**Databases:** MongoDB, MySQL, Neo4j

**AI/ML:** RAG, LoRA, PyTorch, HuggingFace Transformers, LLMs, Vector Embeddings

**Tools & Platforms:** Git, GitHub, Postman, Agile/Scrum, Notion, Power BI

**Core CS:** Data Structures & Algorithms, Operating Systems, Computer Networks, System Design, Machine Learning

## CERTIFICATIONS & ACHIEVEMENTS

**Certifications:** AWS Cloud Quest: Cloud Practitioner, Cloud Computing – NPTEL, Postman API Fundamentals Student Expert

**Achievements:** Competed in 6+ hackathons, secured 1st place at Webathon 3.0 (ACM VNRVJIET), and 2nd place at Web Alchemy (CSI VNRVJIET)
